

Liam obtained his undergraduate degree in Biology jointly from the Université Paul Sabatier (Toulouse, France) and Imperial College London. He then completed a Wellcome Trust-funded PhD under the supervision of Stephen Royle at the University of Liverpool studying mitosis. His first postdoctoral position was in the laboratory of Melina Schuh at the MRC Laboratory of Molecular Biology in Cambridge, where he studied meiosis in mouse oocytes. He currently holds a Marie Skłodowska-Curie Fellowship to study the mechanisms of anaphase in both mitosis and meiosis.
